

## *Kendra Grant*

Kendra Grant began researching and educating herself and her family on DVT/PE after she lost her Father abruptly to a fatal pulmonary embolism in September of 2005. With no prior health conditions and leading a healthy life as a former Navy Underwater Demolition team member, it was hard to fathom that something could abruptly end her father's life. His death has inspired her to promote public awareness, elevate medical action and help prevent another devastating fatality like his.
